核心

Tooth forms and colors, or mouth shapes are different to one another. Highly advanced training as a dental technician is needed in order to restore esthetic and natural tooth colors and to complete a well-fitted with good function.

Our dental technician creates a mouth guard to fit the patient's use.

In order to make a mouth guard to fit, we select the proper shape & material to suit each patient.

Material selection is important.

Which sheet thickness will fit? Hard object or Soft object?

What technology do we have?

Our dental technology could create post crown which is similar color & shape to natural tooth.

We can make tooth in short delivery times and correspond to various cases.

What is difference between a good crown and a bad crown?

Good fit, contact, engagement & color adjustment to other teeth should be confirmed.

Company Profile

**Ricc**

What we can Do.  
What only us could Do.
